

COLONIAL AMERICA

Life was so different in Colonial America. All girls couldn't go to school because they had to stay home. The boys had to go to grammar school. Only the rich people can go to the real school.

Colonial people had to hunt or plant their own food. They hunted turkey and other animals.

The girls had to wear long dresses. And the boys had to wear cut pants and long sleeved shirts.

I would hate to live in Colonial America. Because it has too many rules and weird clothes. CJ

Life was so different in Colonial America. All of the girls couldn't go to school. They had to stay home and work. Colonial people had to hunt their own food. There were no grocery stores back then. The girls had to wear long dresses. Clothes were very strict back in Colonial time. I wouldn't like to live in the Colonial times. It would be very boring to live in Colonial America. Alia

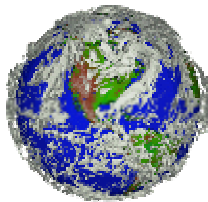

Life was so different in Colonial America.

All the girls couldn't go to school, because they had to stay home and clean. Only wealthy people could go to school. Even if you were wealthy and you were a girl you still couldn't go to school.

Colonial people had to hunt or plant their own food. Some of the food they hunted were deer, rabbits, and buffalo.

The girls had to wear long dresses. Boys wore short pants and stockings.

I would like to go back in time to Colonial America. It would be fun to see with my own eyes how everything worked. Brandon

Clouds

What are clouds? What are they made of? Can you sit on them? How do we know they are clouds?

Cirrus clouds are spread apart. Looks like a pretty day, high in the sky.

Stratus clouds look like a storm. They are gray clouds. And are real low to the ground.

You cannot sit on them. And they are made of water droplets. Their names are from their same shapes and heights. Isaac

What kinds of clouds are there? I'm going to tell you about clouds. There are cumulus, stratus, and cirrus clouds.

Cumulus live a lifetime of 5-40 minutes. It's associated with powerful thunderstorms. It looks like a cotton ball and it looks fluffy.

Stratus stretches across the sky. If it's cold enough it can have ice particles. The name comes from a Latin word that means to spread out.

Cirrus means "mares" tails. It points in the direction where the wind blows.

There are different kinds of clouds. They have different names. They can look like things in the sky. CJ
