

## Third Grade October Virtual Field Trips

Easter Island has a lesson for us to remember today. It was found in the South Pacific. This island was formed by volcanic eruptions. The islanders started making thousands of statues. They were made out of a material called Moai. Natural resources like wood were wasted in the movement of statues. Homes and boats were also constructed from the wood. Today we could too find ourselves struggling to preserve our natural resources unless we begin to protect them now. Taylor

Easter Island has a lesson for us to remember to day. It was found in the South Pacific this island was formed by volcanic eruptions. The islanders started making thousands of statues they were made out of a material called Moai. Natural resources like wood were wasted in the movement of Statues. Homes and boats were also constructed from the wood. Today we could too find ourselves struggling to preserve our natural resources unless we begin to protect it. Ruby

Easter Island has a lesson for us to remember today. It was found in the South Pacific. This island was formed by volcanic eruptions. The islanders started making thousands of statues. They were made out of a material called Moia. Naturel resources like wood were in the movement of statues. Homes and boats were also constructed from the wood. Today we could too find ourselves struggling to preserve our Natural resources unless we begin to protect them now. Alex

Easter Island has a lesson for us to remember today. The island is located in the Pacific Ocean. The civilization created a cult. That turned the island into a place where people live.

It is found in the South Pacific. It is a tiny island. It is made of volcanic rock. That holds and forms the island. There are two volcanos on each side of the island. It is covered in palm trees. There are caves formed by lava called tubes from when the lava went through the tube.

All the islanders started making thousands of statues. There are many varieties of states. They are all made from a small tuft called maori. It is soft and good for carving. There are legends with these statues. That's all they really cared about. Natural resources like wood were wasted in the moment. The wasting of the trees caused erosion. They could not grow food any more. They turned to cannibalism. That means they ate each other. Most of their culture began to die it was a tragedy. Aleen

Easter Island has a lesson for us to remember today. The island is located in the Pacific Ocean. The civilization of the island created a cult that turned the island into a place where people can no longer live.

It can be located in the South Pacific. The island has caves called tubes formed by boring and they also built statues. They used trees to haul statues and the statues sometimes looked different.

Then they found that they were hungry. They could not grow food because they used all the trees.

By using the trees it caused erosion. It ruined the land. When this happened, they got hungry. They began to eat each other. This is called cannibalism.

We should learn a lesson from this. The way we waste our trees and lands we could end up like them. We should all try not to litter or waste things. If everyone tries a little harder to save the trees this will not happen to us.

Kendall

Easter island has a lesson for us to remember today. The island is located in the Pacific. The civilization of the island created a cult that turned the island into a place where people can no longer live.

It is found in the South Pacific. The island was extremely small. Easter Island is made from volcanoes. This island has caves called tubes formed by lava.

The islanders started making thousands of statues. There are different varieties of statues. Their statues are made from soft tuff called moai. Their religion or cult is all they cared about.

Natural resources like wood were wasted in the moving of the statues. There was wasting of the statues. There was wasting of the trees caused by erosion. They could not grow food. Their culture began to die. Today we too could find ourselves in extinction. Cynthia
